Steps Forward in Forwarding

1919-1964

Efficient documentation is just one of the many means by which an Ocean Freight Forwarder, Custom House Broker and Air Cargo Agent saves you money; frequently he's your personal representative to banks, suppliers, customs officials . . . a recognized traffic expert who knows the best rates, routes and carriers. If you could see the desk of a senior clerk in an established forwarding office, you would be amazed at the details essential to the handling of a single export or import shipment. The activity could be likened to that of a juggler trying to keep ten balls in the air simultaneously.

During the past year, our own company has experienced continued growth and progress. We have kept our customers better advised of important events in the world of shipping through our widely accepted news bulletin, "Stepping Forward". We have also moved our office to more modern, efficient quarters. In these and many other ways, we are constantly striving to serve you, our customers, to the best of our ability. As we enter our 45th year, we realize that this is still the very basis of our existence.

NAMES OF THE MONTHS

January was named for Janus, the Roman god who had two faces; one looking into the past and the other into the future.

February comes from the Latin word Februo, to purify. It was the time of the year for Roman ceremonies of purification.

March was named for Mars, Roman god of war, and in the time of Romulus it was the first month in the year. In this day there were only ten months in the calendar. These were of uneven lengths, some having less than twenty days and some containing as many as thirty-five days. When Numa became King, which was about 700 years before Christ, he decided that there should be 12 months and added two—January and February—and placed them at the beginning of the calendar; and in that way March became the third month. Among the old Saxons this month was known as Lenct, meaning spring, and this is the origin of our word Lent.

April is from the Latin word Aperio, to open; it is at this season that the flowers and leaves begin to bloom. The Saxons called the month Easter Month, in honor of Easter, the goddess of spring.

May was named for Maia, daughter of the Roman deity Atlas.

June was named for the goddess Juno.

July for a long time was known by its old name of Quintilis, from the Latin meaning five, as it was the fifth month in the ancient calendar of Romulus; but its name was changed to July in honor of Julius Caesar.

August, too, retained its old name of Sextilis (the sixth month) until the time of Augustus, who changed it to August.

September is from the Latin septem, seven; originally the 7th month, it has been the 9th for 2,000 years.

October, November, and December also retain the names by which they were known when there were but ten months in the year, being derived from the Latin words *Octo*, *Novem*, and *Decem* — eight, nine, and ten.

NAMES OF THE DAYS

English names for days of the week come from Norse mythology by way of Anglo-Saxon, and for that reason are often similar to the Roman names, which the Teutonic tribes adapted. The Romans named their days after the sun, moon and planets — Mars, Mercury, Jove (Jupiter), Venus and Saturn, which were named after their gods.

Sunday, the sun's day, is the same in German: *Sonntag*. But Italian, French and Spanish name it after the Lord's Day.

Monday, the moon's day, is *Montag* in German (*Mond* moon), but the Latin *luna*, for moon, survives in Italian, French, Spanish.

Tuesday is the day of Tyr, Norse god of war; the French *Mardi* and Italian *Martedì* come from Mars, also Roman god of war.

Wednesday comes from Woden, a Norse god, but the Romance languages derive their words from the Roman Mercury, while the Germans call it *Mittwoch* — midweek.

Thursday is the day of Thor, god of thunder. His Latin equivalent, Jove, accounts for *Giovedì* (Ital.), *Jeudi* (Fr.), *Jueves* (Span.).

Friday is the day of Freya, Norse goddess of marriage. Similarly the Romance languages get their names from Venus, Roman goddess of love.

Saturday is derived from Saturn. In Italian it is *Sabbato*, the Sabbath; *Sábado* in Spanish.

POINTS OF CONSTITUTIONAL LAW

Congress must meet at least once a year.

Congress may admit as many new states as desired.

One State cannot undo the act of another.

By the Constitution every citizen is guaranteed a speedy trial by jury.

Congress cannot pass a law to punish for a crime already committed.

A person who commits a felony in one State cannot find refuge in another.

Treaties with foreign powers are made by the President and ratified by the Senate.

The territories each have a delegate to Congress who is allowed the privilege of debate, but not the right to vote.

The Vice-President, who ex-officio presides over the Senate has no vote in that body except in case of a tie ballot.

If the President holds a bill longer than ten days while Congress is in session it becomes a law without his signature.

An act of Congress cannot become a law over the President's veto except on a two-thirds vote of both houses.

The House of Representatives may impeach the President for any crime, but the Senate has the sole power to try all impeachments.

Amendments to the Constitution of the United States require a two-third vote of each House of Congress, and must be ratified by at least three-fourths of the States.

The President of the United States must be at least 35 years of age; a Senator, 30; a Congressman, 25; The President must have been a resident of the United States fourteen years.

A naturalized citizen is not eligible to the office of President of the United States. A male child born in a foreign land to American parents has an equal chance to become the President with one born on American soil.

The United States shall guarantee to every State a Republican form of government, and shall protect each of them against invasion, and on application of the Legislature or of the Executive (when the Legislature cannot be convened), against domestic trouble.

Note — A dash line over a numeral multiplies the value by 1,000: thus, \overline{X} = 10,000; \overline{L} = 50,000; \overline{C} = 100,000; \overline{D} = 500,000; \overline{M} = 1,000,000; \overline{CLIX} = 159,000; \overline{DLIX} = 559,000.

Other general rules in Roman numerals are as follows: (1) repeating a letter repeats its value — XX = 20; CCC = 300; (2) a letter placed after one of greater value adds thereto — VI = 6; DC = 600; (3) a letter placed before one of greater value subtracts therefrom — IV = 4.

Arabic numerals are those now commonly in use — 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, etc.

KNOTS AND MILES

The **U. S. Statute Mile** is 5,280 feet in length. On the Continent most of the old miles, which varied in length from about 3,300 feet to over 36,000 feet, have been replaced, officially at least, by the kilometer, which equals 0.6214 statute mile or 3,280.8 feet.

The **Nautical, Geographic, or Sea Mile** at any place is considered, for purposes of navigation, to be equal to the length of one minute of longitude at that place.

The **U. S. Nautical Mile** is 6,080.20 feet in length and equal to one-sixtieth of a degree of a great circle of a sphere whose surface is equal in area to the area of the surface of the earth (Clarke's spheroid of 1866).

The **Knot** is a measure of speed; a speed of one knot being a speed of one nautical mile an hour.

A **Nautical Mile** — 1.1516 statute miles; a **Fathom** — 6 feet; a **Cable** — 100 fathoms or 600 feet or approximately 0.1 nautical mile.

To convert statute miles into nautical miles, multiply statute miles by 0.8684; to convert nautical miles into statute miles, multiply nautical miles by 1.1516, or roughly $1\frac{1}{7}$.

United States Air Forces and the Navy use the knot as the standard aeronautical unit of speed and the nautical mile as the corresponding unit of distance.

MISCELLANEOUS TECHNICAL DATA

- To find diameter of a circle multiply circumference by .31831.
- To find circumference of a circle multiply diameter by 3.1416.
- To find area of a circle multiply square of diameter by .7854.
- To find surface of a ball multiply square of diameter by 3.1416.
- To find side of an equal square multiply diameter by .8862.
- To find cubic inches in a ball multiply cube of diameter by .5236.
- Doubling the diameter of a pipe increases its capacity four times.
- Double riveting is from 16 to 20 per cent stronger than single.
- One cubic foot of anthracite coal weighs about 53 pounds.
- One cubic foot of bituminous coal weighs from 47 to 50 pounds.
- One ton of coal is equivalent to two cords of wood for steam purposes.
- A gallon of water (U. S. Standard) weighs 8-1/3 lbs. and contains 231 cubic inches.
- There are nine square feet of heating surface to each square foot of grate surface.
- A cubic foot of water contains 7 1/2 gallons, 1728 cubic inches, and weighs 62 1/2 lbs.
- Each nominal horse power of a boiler requires 30 to 35 lbs. of water per hour.
- To sharpen dull files lay them in dilute sulphuric acid until they are eaten deep enough.
- A horse power is equivalent to raising 33,000 lbs. one foot per minute, or 550 lbs. one foot per second.
- To find the pressure in pounds per square inch of column of water, multiply the height of the column in feet by .434.
- Steam rising from water at its boiling point (212 degrees) has a pressure equal to the atmosphere (14.7 lbs. to the square inch).

HOW TO FIGURE PROFIT

Experience indicates that many business men have the wrong idea about figuring profit. Remember that 20 % added to cost does not yield 20 % profit. Profit is properly figured on selling price. To make 20 % profit you must add 25 % to cost.

To find correct selling price to gain a certain net profit: Add the percentage of cost of doing business and the desired per cent of profit. Subtract this from 100. Divide the cost by this remainder.

INTEREST CALCULATIONS

RULE: Multiply the principal by as many one hundredths as there are days, and then divide as follows:

Per cent 4 5 6 7 8 9 10 12
Divide by 90 72 60 52 45 40 36 30

EXAMPLES: Interest on \$100, for 90 days at 5 per cent: $100 \times .90 = 90.00$ divided by 72 = 1.25 (1 dollar and 25 cents); on \$1, for 30 days at 6 per cent: $1 \times .30 = .30$ divided by 60 = .005 (5 mills).
